

Sheet Explosive BreachPop

Information Sheet

BreachPops were designed with three goals in mind:

- 1) Lower the N.E.W. to increase operator safety and reduce collateral damage
- 2) Be simple to build
- 3) Interface with an operator's standard equipment

The BreachPop is a tamped charge container made from soft ABS plastic containing P3D Solutions, Inc's proprietary tamping medium. Our tamped casing allows for the use of less explosive materials on a given target than when using traditional breaching methods. BreachPops are designed to be easy to carry, using equipment already available, so operators never have to place charges in pockets, dump pouches, or specialty pouches. A pistol magazine pouch can hold up to two BreachPops and an M4 pouch can hold up to four. An overall height of 5" keeps the BreachPops low profile, protruding no higher from a magazine pouch than a standard magazine.

The **Sheet Explosive BreachPop** is designed to hold a 5 inch long piece of C1, C1.5 or C2 prima sheet in the channel on its face. With different loadings, this charge container can be used to breach doors ranging from lightweight interior doors up to fiberglass exterior doors and even Class I and II metal doors when paired with P3D Solutions carbon strips.

Terms of Use, Warning and Disclaimer

When loaded with explosives, the BreachPop is a fundamentally dangerous product. Improper application may result in serious injury or death. P3D Solutions, Inc and BreachPop, LLC assume no liability, express or implied, from the use or misuse of this breaching apparatus. While shot data has been gathered in the development of this product, there is no warranty, express or implied, resulting from the use of said data.
